Education

Università degli Studi di Milano (Statale) Milan, Italy
Bachelor's Degree in Computer Science | 104/110 *Sep. 2022 – Apr. 2026*

Projects

Blockchain AI Game Framework | GitHub | *Algorand, React, Node.js, Ollama* Thesis Project
- Developed a framework to deploy games as smart contracts on the Algorand blockchain utilizing a commit-reveal scheme.
- Built a Web3 frontend for user wallet authentication and game interaction on localnet/testnet.
- Integrated 7 autonomous AI agents running locally via Ollama, implementing memory management to allow agents to learn and adapt game strategies over time.
- Created a custom CLI for backend management and smart contract interactions.

Summer Camp Management Platform | Live Site | *React, Supabase, Vercel, Resend* Freelance
- Designed and deployed a full-stack management platform from scratch, successfully processing 500+ child enrollments representing over €126,000 in registration value during the first launch season.
- Implemented secure authentication and a comprehensive admin dashboard to track enrollment statuses, financial records, and operational camp details.
- Utilized Supabase for robust database management and integrated Resend for automated transactional emails.

PwC "Insurance Hack Arena" | *Business Case, UI Prototyping* 2nd Place Winner (out of 7 Teams)
- Conceptualized and prototyped a dynamic travel insurance web app featuring a real-time destination risk dashboard and on-the-go customizable coverage.
- Designed an interactive UI prototype to pitch the business case to stakeholders, effectively bridging the gap between traditional static insurance models and dynamic user needs.

ForkIt - Open Source Fast Food | GitHub | *JavaScript, Express, Node.js, MongoDB* Academic Project
- Engineered a RESTful backend using Node.js and Express to power a collaborative recipe and order management system.
- Implemented secure Role-Based Access Control (RBAC) to isolate permissions between 4 distinct user tiers (Guests, Customers, Staff, Owner).
- Designed a MongoDB schema to handle concurrent active orders, executing real-time dynamic cost calculations and custom recipe storage.

Experience

Junior Data Engineer Jun. 2026 – Present
SocialThingum - IT Consulting Firm *Milan, Italy (Hybrid)*
- Engineered and orchestrated automated ETL pipelines on Google Cloud Platform utilizing Apache Airflow (Cloud Composer) and Dataform, managing complex dependencies, custom operators, and incremental loads.
- Designed and implemented a robust Data Quality framework in BigQuery using SQL to detect anomalies in large-scale billing and pricing datasets, integrating automated alerting mechanisms.
- Optimized data processing and cloud costs by developing partitioned, incremental models and materialized views in BigQuery for multi-terabyte datasets.
- Developed Business Intelligence dashboards (Looker Studio) to monitor project KPIs, while authoring comprehensive architectural blueprints and technical documentation for data workflows.

Technical Sales & Operations *Promoted from Installer (Sep 2020 - Mar 2021)*
Thermoinfissi S.R.L. *Apr. 2021 – Jul. 2022*
- Transitioned from physical installation to a commercial role, managing B2B/B2C client relations and supplier orders.
- Engineered dynamic Excel pricing models, replacing manual paper calculations and reducing quote generation time by an estimated 80%.
- Streamlined the sales pipeline by automating complex markup/discount logic, enabling instant multi-product price comparisons and tax document generation.

Technical Skills

Languages: Python, SQL, JavaScript, Java, C++, Go, Assembly, Shell Script
Cloud & Data Engineering: Google Cloud Platform (GCP), BigQuery, Apache Airflow, Dataform, Looker Studio
Web & Frameworks: React, Node.js, Express, Vite, HTML/CSS
Databases & Tools: MongoDB, Supabase, Git, Linux, Docker, Algorand SDK, Ollama (Local AI)
